Funding Goal

2.25m€

Team

As of Q2 2019

Medicus is an AI-based platform that interprets and converts medical reports and health data into an interactive, personalized experience with easy-to-understand explanations, insights and continuous health coaching.

PROBLEM

While insurers struggle with **rising costs & claims**, patients struggle to **understand their health**. In fact, every year **20 billions lab reports** get printed and delivered. This makes up for c. **80% of all diagnosis-relevant data** and yet, **over 500m people google** their reports to understand what they mean. However, understanding your health is **the basis for a healthy life**.

SOLUTION

- Medicus is powered by a **proprietary and guideline based medical reasoning engine** with 120,000 rules, 15,000 decision trees and 350,000 words of content per language (and growing) that turns numbers into insights. Currently, Medicus supports 4 languages (EN, GER, FR, AR).
- **Unique user profiling** provides personalized content & experience while maintaining **real privacy** with all engine logic running directly on the phone (all data kept on user's devices and/or providers' servers).
- **And our proprietary wellbeing score** quantifies health holistically and tracks progress on tiny scales.

PRODUCT / SERVICE

Medicus **works with diagnostic labs** to deliver **smart features & insights** to both doctors - in terms of smart testing & diagnosis support - and to patients in the form of visual & interactive reports, powering continuous healthcare & coaching across all digital platforms. Medicus also **empowers insurance providers to deliver a wellbeing platform that is fully private** and interacts with people of all profiles to provide **uber-personalized health engagement**, in addition to smart & unique wellbeing coaching.

MILESTONES

- Active in 6 markets: Germany, France, Switzerland, Austria, Luxembourg & M. East
- Working with **10 clients** with €1.4m in bookings; closing deals totalling €4.2M
- Strategic partnership agreement with Roche Diagnostics (distribution & more)
